Hyung Cho

Software Test Engineer | Embedded Product V&V, Test Automation, and Root-Cause Analysis

Los Angeles, CA | hcho22@gmail.com | (408) 655-5691 | linkedin.com/in/hyungcho | github.com/hcho22

SUMMARY

Validation engineer with 10 years at Zebra Technologies verifying embedded hardware products: test plans, procedures, acceptance criteria, and final reports for 6 shipped products, and root-cause isolation across hardware, firmware, and software. Now writes Python, TypeScript, and Swift test suites with quality gates in GitHub Actions CI. Directs AI coding agents under human review, with a risk assessment on each change and CI checks that keep requirements and test evidence aligned.

EXPERIENCE

Independent AI Engineer | Self-directed projects, Remote **Jun 2025 - Present**

Solo product work, built by directing AI coding agents (Claude Code, Codex).

Rep Today, native iOS workout app, pre-release

- Grew the XCTest unit suite from 829 to 1,687 tests; CI runs 1,665 of them on both iOS 18 and iOS 26 with 0 failures.
- Found and fixed platform-specific defects through CI and cross-OS testing, including an iOS 18 layout feedback loop that hung the suite past the 45-minute job limit, closed with a regression test.
- Directed development as 196 agent-authored pull requests, 180 with a written risk assessment separating scenarios validated live in the app from those covered only by tests.

Immerse, film-camera iPhone app, in development

- Added CI scripts that fail the build when the requirement evidence map and the task tracker disagree (136 requirements, 74 acceptance clauses, 9 invariants) or when a debug-only unlock reaches the release build.
- Diagnosed intermittent UI-test failures that turned main red four times and fixed them by splitting race-prone tests.

Purvia, permission-aware RAG and support-bot app, open source

- Wrote an offline Python backend test suite that runs on every pull request with credentials stripped and network access blocked, plus integration tests against a local Supabase stack.

CreativeBridge, K-12 AI story-writing iOS app, internal TestFlight builds

- Took the codebase from 961 TypeScript errors, 762 ESLint problems, and 790 failing Jest tests to zero, then made type-check, lint, and tests blocking CI steps.

Volunteer AI/ML Engineer | Omdena, Remote **Apr 2023 - Jun 2025**

Unpaid collaborative ML projects with global volunteer teams.

- Led a DeepLabV3+ cancer-cell segmentation pipeline: preprocessing, training, evaluation, and deployment.
- Built UNET and DeepLabV3+ models on Sentinel-2 satellite imagery to map deforestation and seagrass habitat.
- Fine-tuned LLaMA and Falcon, integrated ChatGPT into a chatbot, and iterated on prompts with an evaluation workflow.
- Containerized models with Docker for reproducible environments across volunteer teams in several time zones.

Career break and ML retraining **Aug 2018 - Mar 2023**

Self-directed ML study and the FourthBrain ML Engineering bootcamp (2022); 29 public ML projects on GitHub.

Senior Validation Engineer | Zebra Technologies, Agoura Hills, CA **Feb 2008 - Jul 2018**

- Led validation testing for 6 shipped hardware products, writing test plans, procedures, acceptance criteria, and final reports.
- Isolated root causes of failures across hardware, firmware, software, and test infrastructure, and proved each fix.
- Built C# validation tooling that replaced manual test workflows and cut regression test cycles by about 30%.
- Owned SDK validation across Windows, macOS, and Linux: compatibility, performance, and reliability.
- Mentored 10 test technicians and set quality and lab process standards adopted across the products the team validated.

SKILLS

Verification and validation: Test planning, Hardware validation, Failure analysis, Reliability testing, Requirements traceability
Test automation and CI: Python, TypeScript, C#, Test automation, XCTest, Jest, GitHub Actions, Flaky test diagnosis
AI-assisted engineering: AI coding agents, Claude Code, Code review, Technical writing, Mentoring

EDUCATION AND TRAINING

B.S., Electrical Engineering, California Polytechnic State University, San Luis Obispo
FourthBrain ML Engineering bootcamp (2022); DeepLearning.AI deep learning and generative AI courses
